

Data Management

July 2018

WHAT WE'VE DONE SO FAR

The Trustees released our second annual report to the public to show our restoration progress, as well as how we're spending settlement funds. The project reports are created through the DIVER system and are available on each restoration area page and on the interactive map.

The Cross-TIG Monitoring and Adaptive Management work group will use DIVER to synthesize and evaluate monitoring information across projects and Trustee Implementation Groups.

WHAT WE DO

During the damage assessment, we collected environmental data to document the location and extent of ecosystem injuries. We collected tens of thousands of samples and observations to determine the oil's impact.

We are collecting information on our restoration projects, including monitoring data, and will continue to provide regular updates on project activities and monitoring.

Assessment and restoration information and data are available through the Data Integration, Visualization, Exploration, and Reporting (DIVER) and Environmental Response Management Application (ERMA®) tools. DIVER integrates data from many sources, which is a key feature of the system as we work with data partners across the Gulf.
